

Small Closet Measurement Worksheet

The numbers every no-drill closet idea depends on. Measure once, buy right - or skip the purchase entirely.

1. Core measurements (inside the closet)

Measurement	Inches	Cm	Notes
Closet width (inside)			
Closet depth (inside)			
Total height			
Rail height from floor			
Rail to shelf above			
Floor to hanging clothes			

2. Door & clearance checks

- ☐ Door type: hinged / bifold / sliding / curtain / none. (Over-door storage only works on hinged doors.)
- ☐ Top-of-door frame gap fits an over-door hook (measure the gap in mm).
- ☐ Door opens fully without hitting anything once hooks/products are on.
- ☐ Widest item stored (boots, suitcase, vacuum) - measure it and give it a home first.

3. Dead-space audit - where the free storage is

- ☐ Gap between hanging clothes and the floor (fits crates or a second rail?).
- ☐ Side gaps of 6-10 in (15-25 cm) (fits a slim rolling cart?).
- ☐ Space above the top shelf (light items only: scarves, caps, seasonal smalls).

4. Before-you-buy checks

- ☐ Tension products: span measured wall-to-wall; narrower spans hold better.
- ☐ Hanging organizers: rail can take the extra weight without bowing.
- ☐ Adhesive hooks: surface is smooth, clean and non-textured - and the item is genuinely light.
